QUALITATIVE ASSESSMENT

Climate Change

- How critical do you think the role of LLM-based chatbots can be in raising awareness about climate change among the general public?
- In your opinion, what are the key challenges in generating accurate and reliable climate-related information using these chatbots?
- From your expertise, what potential biases or misinformation were present in the evaluations that we should be cautious about when using chatbots to disseminate climate-related data?
- Can these chatbots be deployed to facilitate climate change adaptation and mitigation strategies for vulnerable communities?
- What features would you prioritize in a climate change-focused chatbot to enhance user engagement and understanding?
- How do you foresee the integration of chatbots with other climate communication platforms or initiatives?
- From your perspective, can these chatbots be leveraged to encourage sustainable behaviors and lifestyle changes among users?
- Were the information provided by these chatbots up-to-date and relevant with respect to new scientific discoveries and data?
